

Syed siddiq hussain

Senior Data Engineer

✉ Siddiqsyed7989@gmail.com ☎ 8328643706 📍 india

PROFILE

- 5+ years of experience in the IT industry, including 4+ years specializing in Data Engineering and in designing, developing, and optimizing big data applications for storage, querying, and processing using Hadoop and Spark.
- In-depth expertise in SQL, Python, and Scala; strong understanding of Spark and Hadoop architectures and core components (HDFS, YARN, MapReduce, Hive, Sqoop).
- Proficient in large-scale data processing across the Hadoop ecosystem: MapReduce, Hive, Sqoop, Spark (RDDs, DataFrames, Spark SQL).
- Experienced in building end-to-end ETL/ELT pipelines; developed Hive UDFs/UDAFs; built scalable, distributed data solutions on Hadoop.
- Hands-on with Airflow for workflow orchestration: DAG design, scheduling, monitoring, and alerting.
- Skilled in data ingestion from relational databases to HDFS and back using Sqoop; worked with diverse file formats including JSON, AVRO, PARQUET, ORC, and text.
- AWS experience: S3, Glue, Redshift, Kinesis, and ALB.
- Performance tuning expertise: join strategies, partitioning, bucketing, file format selection, and query optimization for HiveQL/Spark SQL.
- Strong grounding in SDLC and Agile (Scrum/Kanban); blend technical depth with business and analytical skills to deliver quality, results-oriented solutions.
- Continuous learner—resourceful, innovative, and adaptable.

SKILLS

- **Data Eco System** : HDFS, Hive, HBase, Sqoop, Spark, Spark SQL, RDD, Spark Streaming, Kafka.
- **Cloud Technologies** : Amazon Web Services, Microsoft Azure.
- **Relational Databases** : PostgreSQL, MySQL.
- **NoSQL Databases** : HBase, MongoDB.
- **Data Warehouses** : Hive, AWS Redshift, Snowflake.
- **Languages** : SQL, Python, Spark, Scala, Unix Shell scripts.
- **Version control** : Github, Bitbucket.
- **Network Protocols** : TCP/IP, HTTP, SSH.
- **Operating Systems** : Windows, UNIX, LINUX.
- **Methodologies** : Agile (Scrum/Kanban).

PROFESSIONAL EXPERIENCE

Senior Data Engineer CYNOSURE SOFTWARE SOLUTIONS PVT LTD	11/2024 – Present hyderabad
Software Engineer AR SOFTCON PVT LTD	02/2021 – 07/2024 hyderabad

PROJECTS

Project-1: Banking Lakehouse -JP Morgan

Role: Data Engineer

Environment: AWS S3, Databricks (Spark, Delta Lake, Auto Loader), AWS Glue Catalog, Python (PySpark), SQL, Git

Description: Built an end-to-end Banking Lakehouse on Databricks using AWS S3, Delta Lake, and PySpark to process retail banking data for KPI/risk analytics, while integrating LangChain-based RAG solutions and leveraging OpenAI Codex for AI-assisted PySpark/SQL code generation and development productivity.

Responsibilities:

- Designed bronze/silver/gold Delta layers; optimized with partitioning and Z-Ordering.
- Implemented incremental ingestion from S3 with Auto Loader; handled schema evolution and bad-record quarantine.
- Wrote PySpark transforms for deduplication, joins, data quality checks, and business aggregations.
- Modeled star schema (facts: transactions, balances; dims: customers, accounts) incl. SCD Type 2 for customers.

- Orchestrated Databricks Workflows; managed access via IAM/Databricks secrets; documented with notebooks and SQL dashboards.

Project-2: Enterprise Insurance Data Lakehouse (EIDL) -Nationwide Insurance

Role: Data EngineerEnterprise Insurance Data Lakehouse (EIDL)

Environment: Azure Databricks (Spark, Delta Lake, Auto Loader, Workflows, Unity Catalog), ADLS Gen2, Azure Data Factory, Azure Key Vault, Power BI, Python (PySpark), SQL, Git (Azure DevOps), Azure Monitor/ Log Analytics

Description:Built an end-to-end Azure lakehouse on Azure Databricks and ADLS Gen2 to process insurance policy and claims data for loss-ratio and fraud analytics, while integrating LangChain-based RAG solutions for intelligent document querying and using Cursor AI for accelerated PySpark/SQL development and code optimization.

Responsibilities:

- Designed bronze/silver/gold Delta layers on ADLS; incremental ingestion via Auto Loader with schema evolution and dead-letter handling.
- Developed PySpark transforms for deduplication, standardization, and PII masking/tokenization; added data-quality expectations and unit tests.
- Orchestrated ADF pipelines to trigger Databricks Jobs; parameterized notebooks; managed secrets via Key Vault and managed identities; set up monitoring/alerts in Azure Monitor.
- Delivered Power BI dashboards for loss ratio, claim frequency/severity, time-to-close, and simple fraud rules (early-in-life, high-amount spikes).

Project-3: Sales & Customer Analytics Warehouse - Wayfair

Role: Analytics Engineer

Environment: Snowflake (Warehouses, Stages, Tasks, Time Travel, Zero-Copy Clone), dbt (Cloud/Core, dbt_utils, dbt_expectations, snapshots), SQL, Git (GitHub), Power BI/Looker Studio

Description: Designed and built a modern cloud analytics warehouse to model e-commerce sales, customer, and product performance data for a Wayfair-like retail business. Leveraged Snowflake and dbt to transform raw Shopify data into scalable, analytics-ready data marts enabling revenue tracking, cohort analysis, retention insights, and operational reporting. Focused on data modeling best practices, testing, performance tuning, and BI enablement.

Responsibilities:

- Architected a raw → staging → marts data modeling framework in Snowflake using dbt best practices.
- Ingested and structured Shopify transactional data including orders, order items, refunds, and customer records.
- Built staging models to cleanse and standardize datasets, including currency normalization, timezone alignment, and refund/cancellation logic handling.
- Implemented Slowly Changing Dimensions (SCD Type 2) using dbt snapshots to preserve historical customer and product attributes.
- Added robust data quality tests (unique, not null, relationships) using dbt packages to ensure trust and reliability.
- Optimized warehouse cost and performance using auto-suspend warehouses, clustering on order_date, and zero-copy clones for development/testing.
